

# Summer Risk Update - 01/02/24 - 07/02/24

## Current Level

**2**

**Ban on sprinklers and irrigation systems**

## Chance of Level 3 this summer

**60%\***

**Our latest modelling shows this was most likely to occur in late Jan\***

## Chance of Level 4 this summer

**23%\***

**Our latest modelling shows this is most likely to occur in early Feb\***

Last week, daily use peaked at 189 million litres - down from the previous week's 194 million litres.

With demand stabilising, we can remain at level 2.

## Buffer Average past 7 days

**15%**

**Buffer is above 10%\*\***

**We are at Level 2**

## Buffer Forecast next 7 days

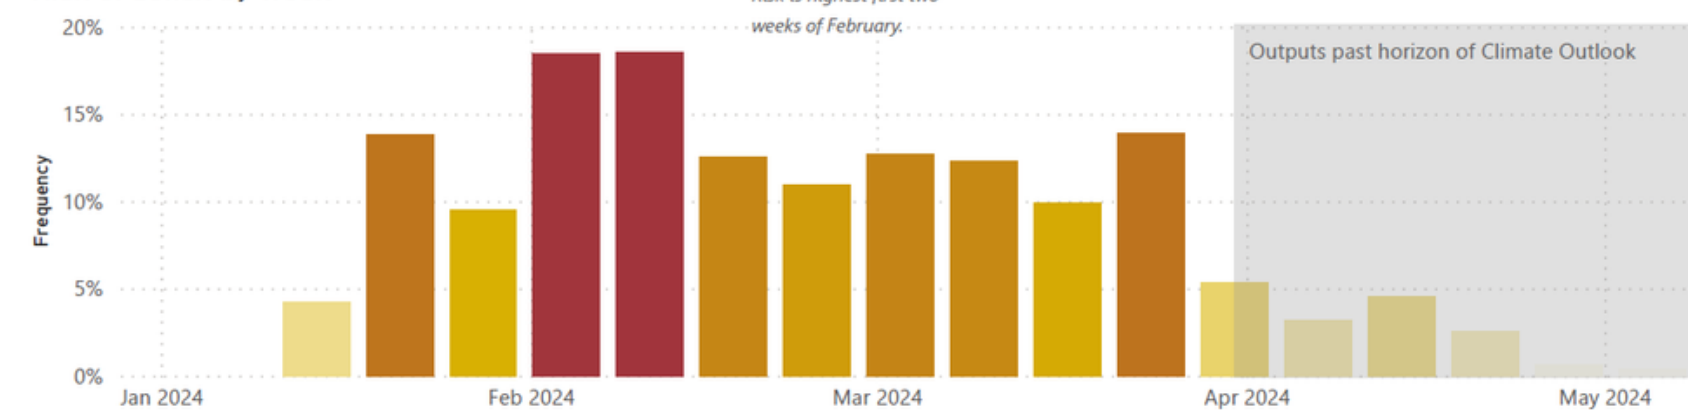

**15%**

**Buffer is above 10%\*\***

**We can remain at Level 2**

## When is risk the highest?

Risk of deficit by week

The next two weeks are the highest risk period.

\*This modelling is reviewed each month and updated as necessary.

\*The efforts of the public following water restrictions can reduce this chance, but this requires everyone to do their bit.

\*\*The buffer is one key indicator of risk, and is offered as a guide only. Other factors are monitored as part of level risk assessment. The buffer is reviewed weekly.
