Wellington Metropolitan Water Treatment Plants – February 2025

Water Treatment plants	Comments	Safe drinking water	Fluoride	Not compliant but nearing compliance
Waterloo*	Waterloo WTP is non-compliant with the Water Services Authority bacterial compliance rules*. This issue does not affect drinking water safety. The WTP is compliant with the Authority's Protozoal compliance rules. Work is currently underway to address the network configuration issue. Waterloo has fluoridated the drinking water within MoH's recommended levels 92.3% of the time. Fluoridation was shut down as a precaution while work was undertaken on the Naenae Reservoir flow and pressure control			*Due to changes in the assurance rules, the capability of the existing Waterloo treatment
Wainuiomata	Wainuiomata WTP is compliant with the Water Services Authority bacterial and protozoal compliance rules. Wainuiomata has fluoridated the drinking water within MoH's recommended levels 99.6% of the time.			 plant facilities, and the layout of the network, a significant treatment plant upgrade and/or additional network infrastructure is required to achieve compliance with the rules
Te Mārua	Te Marua WTP is compliant with the Water Services Authority bacterial and protozoal compliance rules. Te Mārua has fluoridated the drinking water within MoH's recommendation levels 99.5% of the time. The DAF project is going well with commissioning of the 2nd train expected to occur in April			as written.
Gear Island	Gear Isl WTP is compliant with the Water Services Authority bacterial and protozoal compliance rules. Gear Island has fluoridated the drinking water within MoH's recommended levels 98.7% of the time.			

Compliant – we are meeting the necessary regulatory requirements

Supply and long-term drought resilience -February 2025

Supply risk	Comments	Risk level
Short term supply	The Wellington Region moved to Level 1 restrictions on the 29/09/24	
Long term supply (drought resilience)	Increased leakage and the impacts of climate change will likely lead to severe water restrictions in the years to come e.g. Level 4, which would mean asking people to reduce indoor use.	

Low risk of not being able to meet demand or needing water restrictions

Medium risk of not being able to meet demand or likely to need water restrictions

High risk of not being able to meet demand and high likelihood of severe restrictions
