

Works Access Permit

Registration Number: **E909814**

Utility Reference: **Global - Non Excavation**

1. Details of Proposed Work

Activity: Chambers Access, Asset Inspections/Maintenance, Drainage Works, Manhole Maintenance, Meter Maintenance, Survey, Other (Specify Detail)

Address: 30 Laings Road, Lower Hutt Central, Lower Hutt, 5040

Location in road: Carriageway, Footpath, Berm, Nature Strip

WAP valid period: 01 January 2023 to 31 December 2023

2. The Parties

Hutt City Council being a body corporate in accordance with the Local Government Act 2002 ('the Corridor Manager;')

Wellington Water Alliance being an approved Utility Operator in accordance with Local Government Act 2002 submitting a request for access in accordance with that act;

Wellington Water Alliance being the agent of the Utility Operator submitting this request on behalf of the Utility Operator and in accordance with the Utility Operator's statutory rights ('the Applicant').

3. Attachments

Attachment 1 being the Schedule of Reasonable Conditions.

Attachment 2 being plan TMP showing the agreed service location.

4. Background

(a) The Utility Operator wishes to carry out the works stated on CAR Number E909814 and thereafter maintain the utility services established in the corridor;

(b) The Corridor Manager is required to provide a written consent in accordance with its governing legislation and to provide a schedule of reasonable conditions, if required, by the utility legislation under which the request for access has been made; and

(c) In accordance with the Code: Utilities' Access to the Transport Corridors and on behalf of the Corridor Manager, I give my written consent for access to the corridor at the agreed location and attach my schedule of reasonable conditions:

(d) In the case of State highways this Works Access Permit serves as the approvals required under sections 51 and 78 of the Government Rounding Powers Act.

CONDITIONS

Special Conditions

1. Conditions/TMP/Permit must be adhered too at all times, TMP,WAP and conditions are to be keep on site at all times via paper copies or downloaded to a site tablet. Failure to do so may result in a NCN or a stop work notice being issued.
2. Excavations in carriageways - Footpath and Berm.
 1. All excavations are to be backfilled and AC sealed at the end of each shift
 2. Compaction test results are to be uploaded into CAR Manager for all excavation work in carriageways, footpath and berms.
 3. Photos prior to backfill of excavation in carriageways to be uploaded into the CAR showing the 150mm trimming allowance on either side of the excavation.
 4. Hot poured rubber bitumen bandage must be applied where excavations are carried out within the carriageway.
The width of the sealing shoe is to be at least 60mm wide. Once the hot poured rubber bitumen bandage has been applied to the joint/s, an emulsion and grit (or sand seal) is to be placed over the bandage.
The surface joints must be clean and dry before applying the hot poured rubber bitumen.
 5. Kara Collins or a relevant Council Rep must be advised of the back filling of the trench in order for Council to observe the compaction testing. Before backfilling Council must be contacted in order to witness the compaction test, failure to contact Council will result in the work not been accepted and work will not be signed into warranty.
 - 6. Site Photos: ensure that photos are uploaded the CAR, showing the physical works, site setup, and when works are completed (give a reference in the photo i.e. Address - letter box) also required for completion sign off**
 7. Any Small excavations, must reinstated to the 1m rule, this applies for AC and Concrete, any cracks or divots to be captured in the reinstatement.
 8. Only the work stated in the approved TMP, can be completed with the TMP
 9. Steel Plates are not approved to be used on this site
 10. Slot trenching is not approved to be used on the HCC network (C'way and footpath)
 11. Ensure there is an adequate surface for pedestrians being diverted onto grass berms
 12. if temp seal has been approved for this work, it is to include a top layer of coldmix AC and be monitored daily.
 13. all reinstatement is to be done to HCC standards, all remedials are to be completed as soon as possible, if not the same day
 14. Any pedestrians being diverted on to the berm, the berm must have a non slip surface or the berm must be suitable and not boggy/muddy
 15. Yellow plastic plates are to used in con-junction with fencing to cover any small excavations on the berm or footpaths
 16. if trenching is required through a driveway, please contact HCC to discuss (kara.collins@huttcity.govt.nz)
3. Clash of works check, please ensure to check for clashes on the planning map and contact the other party to ensure you can have access to the site, if not, please plan the works to suit the allowed date/s.

General Conditions

4. The Utility Operator must:
 - (a) carry out all Work in Transport Corridors in accordance with the Code and KiwiRail's Specifications for Working in Railway Corridors;
 - (b) undertake all Works in compliance with the Acts of Parliament and mandated codes of practice that relate to their industry and the type of Work described within the plans and methodology submitted;

CAR Number: E909814

- (c) install assets more or less in the location shown on the attached plans, and agree the exact location and position with the Road Corridor Manager before Work commences;
- (d) locate any Utility Structures in the Road Corridor in the agreed position shown on the drawings and clear of the Carriageway, Road Corridor furniture and kerbs, drains, manholes, etc. Utility Structures agreed to be within the trafficable part of the Road are to be flush with the surface and designed to withstand full heavy Traffic loading (NZTA's HN-HO-72 Traffic Loading);
- (e) provide a full description of the construction methodology, reinstatement, resurfacing and compaction and agree this with the Road Corridor Manager prior to Work commencing;
- (f) make the Works available at all times for inspection by any person representing the Road Corridor Manager;
- (g) if requested, pay the reasonable costs of the Road Corridor Manager in connection with the processing of this notice and for the monitoring and auditing of the Works; (See NZ Transport Agency Cost Structure under Clause 23)
- (h) keep a full copy of the Works Access Permit/ Permit to Enter and Reasonable Conditions on the Work Site at all times during the Works;
- (i) undertake remedial action on non-conforming Work within the timeframe set by the Road Corridor Manager, where reasonable and practicable;
- (j) gain all the necessary consents, approvals and permits from the relevant statutory and regulatory authorities at its own cost;
- (k) keep plans of the installed Work and make them available to the Railway Corridor Manager (in all cases) and Road Corridor Manager (on request);
- (l) compensate the Road Corridor Manager for any damage or costs incurred to the Road Corridor due to the Work or for costs resulting from the removal of abandoned installations, Utility Structures, components and equipment that belong to the Utility Operator;
- (m) repair all Road Corridor assets damaged as a result of the Works, should the Road Corridor Manager determine these are necessary prior to the end of the Warranty period;
- (n) restore to their original condition any surface or Utility Structure that was damaged or removed as a result of the Works;
- (o) control the surface water channels so as to cause minimal interference to existing flows;
- (p) fully restore the surface water channels at the completion of the Works;
- (q) notify the Road Corridor Manager of any maintenance Work it proposes to undertake within the two-year Warranty period;
- (r) have in place an approved TMP for Roads and Motorways at least two days prior to Work commencing on the Work Site;
- (s) provide the Road Corridor Manager with two Working Days' notice before commencement of Work on the Work Site;
- (t) ensure that the Work is carried out under the control of a warranted supervisor as required by the Code of Practice for Temporary Traffic Management and ensure that there are sufficient people on site specifically to control the flow of Traffic through the site in accordance with the TMP;
- (u) comply with instructions from an officer of the NZ Police Traffic Safety Branch or a duly

authorised agent of the Road Corridor Manager in respect of Traffic management and safety;

(v) complete Works in the Road Corridor in one continuous operation (suspension of Works over five continuous days requires the prior written permission of the Road Corridor Manager);

(w) protect and maintain all Road Corridor signs, markers, signals, barriers and associated marking and replace them to the appropriate industry standard where they have been damaged by the Works;

(x) complete and submit a Works Completion Notice form when the Works are complete; and

(y) stop Work as necessary to meet the requirements of section 42 of the Heritage New Zealand Pouhere Taonga Act 2014.

5. Work must not take place on or near a State highway during and one day either side of a public holiday or public holiday weekend.
6. Where otherwise required due to Traffic volumes or specific residential or Central Business District requirements, the hours of Work must be as specified in the Local Conditions and Special Conditions.
7. The Warranty period starts from the date the Road Corridor Manager has given signed acceptance that the Work is complete or otherwise as provided in Section 4.7.1.7 of the Code.
8. Unless the Works stated in the WAP have started on the Work Site, the agreement relating to the Works will only remain valid for six months from the date of approval on the Works Access Permit.
9. The Road Corridor Manager must manage all applications relating to Road Corridor access in accordance with the timeframes and processes in the Code.
10. The Corridor Manager may:
 - (a) assess the suitability of any action proposed by the Utility Operator during the Warranty period and impose Reasonable Conditions that will maintain the integrity of the Road assets;
 - (b) arrange for remedial Work to be done and recover the costs incurred from the Utility Operator, if the Utility Operator fails to take action within the agreed timeframe; and
 - (c) instruct the Utility Operator to stop Work and leave the Work Site (having made the site safe) if the Works are not complying with the relevant Reasonable Conditions including any plans, relevant conditions or specifications contained in the Code, or permission requirements.
11. In granting this WAP, no vested right is created.
12. This WAP is not transferable without the written permission of the Road Corridor Manager.

Description of Activity

Non excavation works not needing site specific:

Note: All project works or other work not covered under the Generic Tmp / Tmd will need site specific.

Confirmation is required from RCA to see if Generic covers main arterial roads or suburban shopping areas.

Only approved contractors listed on Tmp are covered under Global Car.

ALL CONTRACTORS ARE TO NOTIFY THE RCA PRIOR TO CARRY OUT THEIR WORK ACTIVITY.

All work carried out may involve having 1 to 2man onsite including sub-contractors.

This work will cover inspections / maintenance / locates that can be completed on the same day.

1. Locating council assets.
2. Investigate any leaks to determine what may be required to carry out any repairs.
3. Poor water quality needing to flush hydrants.
4. Operation of hydrants and valves on the same day.
5. Hydrant painting carried out annually.
6. Flow meter testing, need to access chamber to carry out test.
7. Leak detection surveys carried out by approved contractors AD Riley and Detection Services to locate leaks.
8. Utility asset mark outs.
9. 3 Water asset mark outs.
10. Meter reading - check if any issues with meters and carry out final readings.
11. CCTV inspections.

12. Checking condition of Wastewater / Stormwater assets.
 13. Smoke / Dye testing on Wastewater / Stormwater assets to identify inflow sources, defects and cross connections, this work can take between 2 – 4 hours and will cover set locations in each suburb.
 14. Installation and maintenance of monitoring equipment into manholes to measure flow and overflows from the Wastewater network.
 15. Lifting manhole covers to check assets running clear.
 16. Clearing Wastewater / Stormwater blockages.
 17. Regular hydrant flushing takes approx. 15 mins until run clear cleaning the lines
 18. Regular fortnightly / monthly flushing for the 3 waters that can be completed within 3 to 6 hours.
 19. Culvert / intake clearing removing debris / trash that may impede the flow of water.
 20. Annual pit cleaning to prevent blockages and potential overflows, duration will take no longer than 1.5 hours between 1am to 5.30am.
- No work will be carried out on main arterial roads between 6am to 9am.

Crews and Sub contractors must adhere to the following:

- Ensure proper traffic and pedestrian management is in place.
- Set up correct Tmd to suit the work site.
- Safety induction is carried out as per RCP process
- Ensure safety is adhere to at all times.
- Ensure all efforts are made to minimise disruption to residents, business and pedestrians.
- Make sure relevant documents are onsite.
- Provide photos showing a wide street view of location.
- Photos of Work carried out.
- Clear notes of what work was carried out.
- Site is packed up and left clean and tidy.
- No car will need to be logged in Submitica when carrying out inspection work on same day.

Work Vehicles onsite at various stages of work but not limited to:

Standard work crew:

1 to 2 service vehicles equipped with beacons onsite along with any small plant and equipment to carry out inspections. Crews to set up own Tmd.

Service crews are equipped to set up the following Tmd's only.

Traffic management will be required if you do not carry correct signage.

CC1	F2.1
CC2	F2.2
CC3	F2.5
CC4	F2.6
CC5	F2.7
CC7	J2.16A
CC8	F4.10
CC9	ATMS07
CC10	
CC11	
CC12	

Sub-contractors are to follow the Tmd criteria above, or if you do not have correct signage to set up own Tmd. Any Tmd not listed above will require external traffic management.

Extended crew when needed:

- Traffic management vehicles if unable to set up own traffic.
- Hydro Vac Truck / Digger / Jet Flusher maybe utilised.

Site Specific TMP required depending on the work activities and impact.

Works include sewer blocks on the wastewater network that require entry from a manhole at an intersection and/or in the live lane.

This also includes works on the Stormwater network that may have an impact on traffic and project work taking more than 1 day.

**ANY STATE HIGHWAY WORKS WILL BE AT THE DISCRETION OF CAPITAL JOURNEYS TMC
 ALL WORKS APPROVED BY CAPITAL JOURNEYS TMC MUST THEN BE NOTIFIED TO THE
 TRAFFIC OPERATIONS CENTRE (TOC) PRIOR TO COMMENCEMENT AND POST WORK
 WORKS ARE TO BE PLACED ON THE WEEKLY ROAD WORKS REPORT
 ALL COMPLETED WORKS MUST COMPLY TO WAP CONDITIONS AND ARE TO BE
 REINSTATED ACCORDING TO NZTA STANDARDS**

Quantities of proposed Work (use meters, items, hours and minutes to indicate);

Length of trenching		Number of Cabinets/pedestals effected	
Length of Horizontal/Vertical Drilling		Number of Structures effected (fully explain in description of work)	
Number of holes		Number of assets removed	
Number of Chamber/s effected		Duration of Road / Lane Closure (circle) Hours / Days	
Number of Poles/Posts/Piles effected		Duration of Footpath diversion (circle) Hours / Days	
Number of Car parks/bus stop/taxi stands affected for more than two hours		Duration of property access restricted (circle) Hours / Days	

Health and Safety Policy

Our Purpose |

Creating excellence in regional water services for healthy communities

Our Vision

Our people, suppliers and affected parties go home healthy and safe

Our Beliefs

- Health and safety is our top priority
- We look after ourselves; everyone takes personal responsibility for their own health and safety
- We look out for each other, suppliers and the public; we make sure everyone is safe
- Wellington Water takes a methodical approach to health and safety; we continuously review our systems to ensure they are up-to-date and ensure that health and safety is foremost in infrastructure planning and design
- We're committed to health and safety at all times; nobody walks past an unsafe activity or work site - we make it safe

Our Commitments

Leadership

- We make sure our people work in a safe environment
- We make sure our work sites are safe for suppliers, neighbours and the general public
- We empower our people to manage health and safety in all situations and to stop unsafe acts as they happen; we make sure there's a safe working environment before work continues
- We proactively identify and manage hazards and ensure safe behaviour
- We support the safe and early return to work of any of our people who are injured or sick, and support and follow up on anyone who is injured on a Wellington Water site
- We recognise staff and suppliers who practice excellence in health and safety

Systems

- We make sure our people have the training, skills and resources to work safely
- We ensure infrastructure managed by Wellington Water is designed, constructed, operated and maintained safely, and will remain safe for our people, suppliers and the community
- We accurately record, investigate and report incidents and learn from them
- We monitor our health and safety performance and that of our suppliers as a basis for continuous improvement and identifying new and safer ways of working

Working with others

- Our suppliers are required to commit to our vision of our people and suppliers going home healthy and safe
- We make sure all suppliers working on behalf of Wellington Water have high quality health and safety systems in place
- We comply with and exceed all relevant legislation, regulations, codes of practice and industry standards
- We interpret health and safety broadly and work with all stakeholders to achieve our health and safety vision

A handwritten signature in black ink, appearing to read 'Colin Cameron'.

COLIN CAMERON
CHIEF EXECUTIVE

Living Safely Policy

People at the heart of everything we do

Living safely is how we go about every aspect of our lives; all day, every day. It is more than work, it is about integrating our work, home and interests, our desire to get the best out of life, and to be the best we can. It is recognising our strengths and weaknesses, and making positive choices that benefit our wellbeing and way of life, including those of others in the communities in which we live and work.

We will:

- Demonstrate our commitment through active and visible leadership
- Abide by a simple safety management system that encourages health and safety ownership by each and every individual
- Incorporate health and safety into the way we design, plan and do our work
- Work collaboratively with our subcontractors to meet the required health and safety standards
- Enhance our health and safety skills and behaviours through training and development
- Foster a culture of reporting, learning and sharing
- Be empowered to maintain a safe and healthy workplace
- Promote a positive health and wellbeing mindset
- Meet or exceed relevant standards and legal requirements
- Set measurable objectives and targets to ensure continual improvement

19 December 2022

	General rules (apply to all the above) Inspectors must move to avoid traffic. They must not expect traffic to move or slow down to avoid them. There must be CSD to the Inspector when on the live lane. On busy roads where traffic volumes and speed affect access to the live lane, peak periods should be avoided or a higher level of TTM considered. Crossing a level LV, 1 or 2 road does not constitute being on a live lane but crossing a level 3 road does, unless a pedestrian crossing facility is being used. Vehicle Advance warning in the form of an inspection vehicle fitted with one and preferably two amber flashing beacons and a rear-mounted sign indicating the type of activity taking place must be positioned in advance of the inspection site. A vehicle is not required on a level LV or level 1 road with a permanent speed of less than 65km/h if the Inspector remains on a footpath. On roads with a permanent speed of less than 65km/h an amber flashing beacon is not required on the vehicle if the Inspector or non-invasive works is on an unsealed shoulder (or further away from the carriageway - including a footpath). Spotter A spotter is not required for inspections and non-invasive works on level LV roads. Unless otherwise approved by the RCA, all inspections on the live lane of level 1 and level 2 roads require a spotter. The RCA may provide a list of level 1 roads, times and/or activities suitable for inspection by a single inspector (eg where no level LV roads have been declared by the RCA) Where an unaccompanied Inspector is not able to maintain adequate attention (eg due to work tasks or poor visibility), a spotter will be required or another type of traffic management operation used.
Alternative dates if activity delayed	N/A – works will be carried out within the times/dates as listed.

Road aspects affected (delete either Yes or No to show which aspects are affected)

Pedestrians affected?	Potentially	Property access affected?	Potentially	Traffic lanes affected?	Potentially
Cyclists affected?	Potentially	Restricted parking affected?	Potentially	Delays or queuing likely?	Potentially

Installation

(includes parking of
plant and materials
storage)

- STMS to contact Metlink (0800 801 700) for any works on a bus route or impacting bus stops 30 mins prior to installation. **This includes when a TSL is placed on a bus route**
- STMS to contact WTOC (0800 869 286) for any works affecting or close to traffic signals 30 mins prior to installation.

Once on site, the TMP will be implemented as follows:

- Identify public safety and site safety hazards and how they will be addressed and place on the hazard document for 'toolbox' briefing
- STMS to check the TMP is appropriate to the worksite.
- All vehicles are to have correct signage and flashing beacons. They also need to have continuous and appropriate communication with the STMS and each other on an agreed channel at all times
- Work vehicles required on site will be parked within the site or parked legally nearby.
- Mobile Operations or inspection activities may be required to turn on/off water valves.

Layout Procedure

Installation of the site will be done under a level 1 mobile closure with appropriate work vehicles and crew.

1. A site drive through will be conducted first to confirm layout, conditions and environment are all appropriate for works to proceed.
2. Vehicle positioning will be as far to the left as practical and the installation vehicle will be stationary at the installation of each sign, with activity occurring only on the non-traffic side of the vehicle.
3. Advanced warning signage will be installed first on the left, followed by progressive signage installation in a 'loop' fashion around the site area.
4. Once ALL signage for the site has been installed delineation and direction signage will be installed in the following order;
 - a. Longitudinal Delineation (Along the lane)
 - b. Tapers (Shifting) & RD6 signage
 - c. Tapers (Merging) & RD6 signage

Once all delineation is installed and prior to personnel, vehicle, plant and machinery populating the worksite, a drive through check must be performed by the STMS to ensure the site has been set up as per the selected TMDs, this should include the checking of worksite layout distances.

APPROVED

19 December 2022

Attended (day)	• An STMS or delegated TC/TMO must be onsite at all times. • TC/STMS to assist pedestrians/cyclists/driveways and any resident/business driveways. • For Stop/Stop and Stop/Go setups, cyclists will be sent prior to any vehicles. • STMS/TC will complete 2 hourly site checks and document on the onsite record. Works near Signals: • Any affected signal loops must be notified to WTOC during the pre-installation call to allow them to adjust signal management. Works near Pedestrian Crossings: • TC's to guide pedestrians through/around the closure. Works near a Bus Stop: Bus stop integrated into MTC Stop Point • TC's on stop/go are to stop each bus and assist with loading & unloading of passengers as required. • Bus stop signage is to direct pedestrians towards the stop point Bus stop relocated away from site • Bus stop signage is to be placed to show patrons where the relocation is. • Temporary bus stop signage is to be used • Parking restrictions are to be in place at the relocated bus stop Works near a School: School will be notified of emergency works. Works will be minimized where possible at school drop off or pick up times.
Attended (night)	• An STMS or delegated TC/TMO must be onsite at all times. • TC/STMS to assist pedestrians/cyclists/driveways and any resident/business driveways. • For Stop/Stop and Stop/Go setups, cyclists will be sent prior to any vehicles. • STMS/TC will complete 2 hourly site checks and document on the onsite record. • Additional lighting may be required/supplied. • Noise will be kept to a minimum where possible. Works near Signals: • Any affected signal loops must be notified to WTOC during the pre-installation call to allow them to adjust signal management. Works near Pedestrian Crossings: • TC's to guide pedestrians through/around the closure. Works near a Bus Stop: Bus stop integrated into MTC Stop Point • TC's on stop/go are to stop each bus and assist with loading & unloading of passengers as required. • Bus stop signage is to direct pedestrians towards the stop point Bus stop relocated away from site • Bus stop signage is to be placed to show patrons where the relocation is. • Temporary bus stop signage is to be used • Parking restrictions are to be in place at the relocated bus stop
Unattended (day)	• An unattended site is not required for non-excavation works.
Unattended (night)	• An unattended site is not required for non-excavation works.
Detour route	A detour route is not required or approved in the TMP

APPROVED

CAR E909814
Jason Wildman
STMS Number 307 43

	Does detour route go into another RCA's road network? No If Yes, has confirmation of acceptance been requested from that RCA? No Note: Confirmation of acceptance from affected RCA must be submitted prior to occupying the site.
Removal	STMS to contact Metlink (0800 801 700) upon site removal STMS to contact WTOC (0800 869 286) upon site removal. Work plant / vehicles to be removed from site before closure is removed Removal of the site will be done under a level 1 mobile closure with appropriate work vehicles and crew. 1. Workspace delineation to be removed first (by either removing to the kerb for later collection or directly onto a stationary working vehicle) 2. Centreline delineation may now be removed using the same method as installation 3. Once all delineation is removed – sign removal may commence in a clockwise 'loop' fashion (leaving advanced warning signage in place till last) 4. A full site check being conducted prior to site departure. The STMS will carry out the final check before leaving the site.

Proposed TSLs (see TSL decision matrix for guidance)

	TSL details as required Approval of Temporary Speed Limits (TSL) are in terms of Section 6 of Land Transport Rule: Setting of Speed Limits 2017, Rule 54001/2017 (List speed, length and location)	Times (From and to)	Dates (Start and finish)	Diagram ref. no.s (Layout drawings or traffic management diagrams)
Attended day/night	A temporary maximum speed limit is hereby fixed for motor vehicles travelling over the length of _____ situated between _____ (house no./RP) and _____ (house no./RP) on _____ (street or road name) STMS to document on the Onsite Record daily.	7am – 6pm Or 9am – 4pm Or 7pm – 5:30am	01/01/2023 31/12/2023	F2.11, F2.12, F2.13, ATMS02, F2.14, ATMS04, F2.22, F2.15, F2.16, F2.17, F2.18, F2.19, F2.20, F2.21, F2.30, F2.31, F2.8, F2.9, ATMS03, J2.19a, J2.20a, J2.20b, J2.20c, J2.20d, J2.20e,
Unattended day/night	A temporary maximum speed limit is hereby fixed for motor vehicles travelling over the length of _____ situated between _____ (house no./RP) and _____ (house no./RP) on _____ (street or road name)	N/A	N/A	N/A
TSL duration	Will the TSL be required for longer than 12 months? If yes, attach the completed checklist from section I-18: Guidance on TMP Monitoring Processes for TSLs to this TMP.			No

Positive traffic management measures

APPROVED

CAR E909814
Jason Wildman
STMS Number 307 43

- Side friction delineation installed from TSL to the start of the taper.
- Additional cones may be placed on centerlines, edgelines or shoulders to increase site safety and reduce vehicle speed.
- Use of paddles and TSL
- Cone offset delineation – where cones are placed either side of the lane(s), the cones on one side are placed longitudinally offset from the other by half a cone spacing.

Reduced cone spacing (2.5m)
can be utilised to increase impact

Contingency plans

Generic contingencies for:

- major incidents
- incidents
- pre planned detours.

Remove any options which do not apply to your job

Major Incident

A major incident is described as:

- Fatality or notifiable injury - real or potential
- Significant property damage, or
- Emergency services (police, fire, etc) require access or control of the site.

Actions

The STMS must immediately conduct the following:

- stop all activity and traffic movement
- secure the site to prevent (further) injury or damage
- contact the appropriate emergency authorities
- render first aid if competent and able to do so
- notify the RCA representative and / or the engineer
- under the guidance of the officer in charge of the site, reduce effects of TTM on the road or remove the activity if safe to do so
- re-establish TTM and traffic movements when advised by emergency authorities that it is safe to do so
- Comply with any obligation to notify WorkSafe.

Incident

An incident is described as:

- excessive delays - real or potential
- minor or non-inquiry accident that has the potential to affect traffic flow
- structural failure of the road.

Actions

The STMS must immediately conduct the following:

- stop all activity and traffic movement if required
- secure the site to prevent the prospect of injury or further damage
- notify the RCA representative and / or the engineer
- STMS to implement a plan to safely remove TTM and to establish normal traffic flow if safe to do so
- re-establish TTM and traffic movements when it is safe to do so and when traffic volumes have reduced.

Detour

If because of the on-site activity it will not be possible to remove or reduce the effects of TTM once it is established a detour route must be designed. This is likely for:

- excessive delays when using an alternating flow design for TTM
- redirecting one direction of flow and / or
- total road closure and redirection of traffic until such time that traffic volumes reduce and tailbacks have been cleared.

The risks in the type of work being undertaken, the risks inherent in the detour, the probable duration of closure and availability and suitability of detour routes need to be considered.

The detour and route must be designed including:

- pre-approval from the RCA's whose roads will be used or affected by the detour route
- ensure that TTM equipment for the detour - signs etc are on site and pre-installed.

Actions

When it is necessary to implement the pre-planned detour the STMS must immediately undertake the following:

- Notify the RCA and / or the engineer when the detour is to be established
- Drive through the detour in both directions to check that it is stable and safe
- Remove the detour as soon as it is practicable and safe to do so and the traffic volumes have reduced and tailbacks have cleared
- Notify the RCA and / or the engineer when the detour has been disestablished and normal traffic flows have resumed.

19 December 2022

	Note also the requirements for no interference at an accident scene: In the event of an accident involving serious harm the STMS must ensure that nothing, including TTM equipment, is removed or disturbed and any wreckage article or thing must not be disturbed or interfered with, except to: • save a life of, prevent harm to or relieve the suffering of any person, or • make the site safe or to minimise the risk of a further accident; or • maintain the access of the general public to an essential service or utility, or • prevent serious damage to or serious loss of property, or • follow the direction of a constable acting in his or her duties or act with the permission of an inspector.
Other contingencies to be identified by the applicant (i.e. steel plates to quickly cover excavations)	This will be determined on a case-by-case basis. Where achievable works will stop until emergency or delays have been cleared. Should signals or e-STOPs fail – Manual Traffic Control is to be installed immediately (refer to F2.14 & F2.22).

Authorisations				
Parking restriction(s) alteration authority	Will controlled street parking be affected?	Yes (potentially)	Has approval been granted?	N/A
	Site Specific TMP will be submitted if mobility parking is affected.			
Authorisation to work at permanent traffic signal sites	Will portable traffic signals be used or permanent traffic signals be changed?	Yes (potentially)	Has approval been granted?	No
	WTOC to be notified 30 mins prior to site installation and upon removal.			
Road closure authorisation(s)	Will full carriageway closure continue for more than 5 minutes (or other RCA stipulated time)?	No	Has approval been granted?	No
	N/A			
Bus stop relocation(s) – closure(s)	Will bus stop(s) be obstructed by the activity?	Yes (potentially)	Has approval been granted?	No
	Metlink will be notified 30 mins prior to installation and upon removal.			
Authorisation to use portable traffic signals	Make, model and description/number	eSTOP Portable Traffic Signals: model# • 627 - 1, 627 - 2 • 628 - 1, 628 - 2 • 629 - 1, 629 - 2 • 630 - 1, 630 - 2 • 631 - 1, 631 - 2		
	NZTA compliant?	Yes		

EED			
Is an EED applicable?	EED is not required	EED attached?	EED is not required

Delay calculations/trial plan to determine potential extent of delays

APPROVED

CAR E909814
Jason Wildman
STMS Number 307 43

e-STOP & Stop Go Closures:

Delays of up to 5 minutes can be expected due to the nature of the TTM implemented. The STMS is to take measures to ensure delays remain under 5 minutes at all times, and queues do not extend past the advance warning signage.

If delays are occurring or excessive queueing is apparent, the STMS is to implement one of the following contingency plans;

- 1) Traffic Metering
Send only a specific amount of vehicles per side instead of clearing the entire queue
- 2) Pause works and open site
Make the site safe, remove plant and vehicles from the carriageway and open the tapers
- 3) Prioritise high flow route
Send vehicles from the approach with the highest flow first. Hold side street traffic for slightly longer if required.
- 4) Install additional signage
Install T2A/T234 "Warning – Hidden Queue" signage up to 2xB from the initial advance warning signage for additional advance warning

STMS will continuously monitor for delays – TMC will be notified of any excessive delays.

Public notification plan

A letter drop to residents and businesses is to be completed 5 working days prior to works commencing.

WTOC notification for any works which are in close proximity to traffic signals and/or for a communications plan on permanent VMS within Hutt City region.

Public notification plan attached? No

On-site monitoring plan

Attended (day and/or night)

An STMS or delegated TC/TMO will be on site at all times.
2 Hourly Site Checks to be documented on the on-site record.
STMS/TC to monitor and assist pedestrians, cyclists and driveways when needed.

Unattended (day and/or night)

An unattended site is not required for non-excavation works.

Method for recording daily site TTM activity (eg CoPTTM on-site record)

- Hazard ID sheet
- CoPTTM on-site record.
- Checking process for Generic TMPs form to be completed prior to set up of a worksite when using this TMP.

Site safety measures

- All visitors/contractors to be inducted and hazard ID completed
- PPE gear to be worn by all on site
- Toolbox meeting to be held prior to work commencing.
- Arm bars to be installed around the work area.
- STMS/TC to monitor and assist pedestrians, cyclists and driveway access at all times when required.
- Pedestrian ramps to be installed when required.

Temporary safety barrier system

Will a temporary safety barrier system be used at this worksite?

No

If yes, has the temporary safety barrier system been designed by an installation designer and independently reviewed as being fit for purpose?

N/A

Statement from temporary safety barrier installation designer attached

N/A

Other information

LEVEL 1 LAYOUT DISTANCES TABLE

Permanent speed limit or RCA-designated operating speed (km/h)		≤50	60	70	80	90	100		
Traffic signs									
A	Sign visibility distance (m)	50	60	70	80	90	100		
B	Warning distance (m)	50 or 30*	80	105	120	135	150		
C	Sign spacing (m)	25 or 15*	40	50	60	70	75		
Safety zones									
D	Longitudinal (m)	10 or 5*	15	30	45	55	60		
E	Lateral (m)	1	1	1	1	1	1		
Tapers									
G	Taper length (m)*	30	50	70	80	90	100		
K	Distance between tapers (m)	40	50	70	80	90	100		
Delineation devices									
Cone spacing in taper (m)		2.5	2.5	5	5	5	5		
Cone spacing: Working space (m)		5	5	10	10	10	10		
* Larger minimum distances apply on all state highways and also on all multi-lane roads. The smaller minimum distances may be applied on other roads to accommodate road environment constraints. # On non-state highways with speeds 50km/h or less, a 10m taper (with cones at 1m centres) may be used when there are road environment constraints (eg intersections and commercial accesses). On all roads where shoulder width is less than 2.5m and the activity does not affect the live lane, a 10m shoulder taper is permitted (with at least 5 cones at no greater than 2.5m centres). A taper of 30m (with cones at 2.5m centres) must be used where manual traffic control (stop/go), portable traffic signals or priority give way are employed.									
Lane widths									
Speed (km/h)		30	40	50	60	70	80	90	100
F	Lane width (m)	2.75	2.75	3.0	3.0	3.25	3.25	3.5	3.5

Except for delineation device spacings, which are maximum values, the distances specified in the above tables are minimum values.

Qualifier for engineer or TMC approval
Approval of this TMP authorises the use of any regulatory signs included in the TMP or attached traffic management diagrams. This TMP is approved on the following basis: 1. To the best of the approving engineer's/TMC's judgment this TMP conforms to the requirements of CoPTTM. 2. This plan is approved on the basis that the activity, the location and the road environment have been correctly represented by the applicant. Any inaccuracy in the portrayal of this information is the responsibility of the applicant. 3. The TMP provides so far as is reasonably practicable, a safe and fit for purpose TTM system. 4. The STMS for the activity is reminded that it is the STMS's duty to postpone, cancel or modify operations due to the adverse traffic, weather or other conditions that affect the safety of this site.

Roads of Significance

TMPs on the following roads cannot be self-approved. Approval from the HCC TMC is required.

1. Wainuiomata Hill Road (both directions) from Rishworth Street to Parkway
2. Wainui Road from Rishworth Street to Whites Line East
3. Whites Line East from Wainui Road to Randwick Road
4. Randwick Road
5. Waione Street including Seaview Roundabout
6. The Esplanade (both directions) including Hutt Road roundabout
7. State Highway 2 onramp (Petone)
8. Jackson Street from Hutt Road to Cuba Street
9. Cuba Street
10. Hutt Road
11. Railway Avenue
12. Ewen Bridge from Railway Avenue to Queens Drive including roundabout
13. Woburn Road
14. Ludlam Cres
15. Whites Line East from Randwick Road (including roundabout) to Wainui Road
16. Lower Hutt CBD
17. Melling Bridge
18. Block Road
19. High Street from Queens Drive roundabout to Fairway Drive roundabout
20. Fairway Drive from High Street to Kennedy Good Bridge
21. Kennedy Good Bridge to State Highway 2
22. Eastern Hutt Road from High Street to Stokes Valley Road both directions (including both roundabouts)
23. Eastern Hutt Road from Stokes Valley Road to Reynolds Bach Drive

Checking process for generic TMPs

This form, or a similar company record, must be completed prior to set up of a worksite where a generic TMP is used.

Location details

Road name(s)		House number/RP(s)		Suburb	
Road name(s)		House number/RP(s)			
Generic TMP reference no.		TMD no(s).		Note: The checking process must include all the TMDs to be used	

Category	Points to consider	Y	N	Comment/Mitigation
Road level	Is this at the correct road level?			
Shape	Are the following catered for in the generic TMP? • Intersections • Vertical Curves (hills) • Horizontal Curves (corners) • Sufficient advance warning			
Direction and protection	Check that there is: • sufficient length to place the planned direction and protection • sufficient road width to place the planned direction and protection ie minimum lane width is 2.75m • adequate sight distance on both sides • sufficient room to accommodate required positive traffic control			
Proposed speed restrictions	Is a TSL required? Refer to the TSL decision matrix in CoPTTM (section E Appendix B)			
Plant and equipment	Will your plant and equipment fit within the designated working space?			
Personal safety	Are all workers able to carry out their work within the designated working space? If not are they covered by the rules for inspections?			
Layout diagrams	Is diagram(s) detailed in the generic TMP? Does the diagram(s) match the written section of the TMP?			
RCA notification	Has the RCA been notified?

TEMPORARY SPEED LIMIT (TSL) DECISION MATRIX WORKSHEET

INSTRUCTIONS

Select the appropriate road condition description for each of the four factors, and in the right hand circle list the chosen TSL for that road condition. Transfer lowest TSL to the bottom circle.

Appendix B

Possible
Temporary
Speed Limit

	EXCELLENT	AVERAGE	BELOW AVERAGE	POOR	
	  	 	 	  	
1. Minimum Lane Width	3.5m	3.25m	3.00m	2.75m	
2. Pavement / Surface Condition	The shoulder and lane is clear of loose or greasy material and the traveled way is smooth	The road is close to normal condition except for a few minor defects (eg small pot holes or a few pieces of loose aggregate) 70km/h where new seal has been swept but not marked	Defects and / or loose material on the lane (eg unattended reseals) 50km/h for protection of a new seal	There are major defects and / or significant loose material on the lane (eg recently milled surface, large stones, steel plates)	
3. Visibility and Alignment	There is greater than 140m visibility to the first cone in taper, and the worksite has not imposed a change in alignment	There is less than 140m visibility to the first cone in taper, or vehicles are deflected by 20 degrees or less from the original direction of travel 	There is less than 60m visibility to the first cone in taper, or vehicles are deflected by 20-45 degrees from the original direction of travel 	There is less than 30m visibility to the first cone in taper, or vehicles are deflected by more than 45 degrees from the original direction of travel 	
4. Site Clutter	Low site clutter, clear vehicle lanes, cycle lanes and footpaths	Some site clutter either plant or materials, vehicle lanes, cycle lanes and footpaths are lightly trafficked	Considerable site clutter requires additional management to guide vehicles though the site. Some queues of road users	Has numerous driver distractions including construction traffic. Cycle lanes or footpaths are closed. 30km/h for portable traffic signals, MTC operations or where traffic has to traverse the actual active working space (either in a delineated single lane or where traffic is not separated from the working space)	

Is the lowest speed 80km/h or less and at least 10km/h below the permanent speed?

PEDESTRIAN PROVISION

Detail:

FOOTPATH CLOSED - PEDESTRIANS ESCORTED

Restrictions:

ROAD LEVEL:
ALL**SPEED LIMIT:**
ALL**ATMS05**

STMS to consider if additional safety measures are appropriate to protect hazards / guide pedestrians past the site e.g. safety fencing / cone bars. This is particularly important around excavations. In some instances requirements may change between attended and unattended sites.

Spotters

**Notes:**

- One spotter can be used over short distances where they can suitably control pedestrians through the working space i.e. 20m.
- This plan can ONLY be used during attended times.

**FOOTPATH CLOSED
PLEASE WAIT TO BE
ESCORTED THROUGH**

FOOTPATH

Footpath diverted onto berm behind working space

First preference

F2.1
Level 1

Notes

1. Minimum pedestrian footpath widths:
 - Residential/Rural/Suburban Centre - 1.2m
 - CBD - 2m
2. Where the length of the temporary footpath exceeds 20m, these widths may have to be increased so footpath users do not have to wait to pass
3. Temporary footpath surfaces must be suitable for footpath users
4. Use safety fence to enclose the working space, or at **attended** worksites, cones connected with cone bars can be used to enclose the working space but only for a short period of time
Note: Cone bars are not recommended where heavy equipment (eg a digger) is being used. A safety fence is preferred in these cases
5. This TMD must be used in conjunction with appropriate TTM for any work carried out on the shoulder or in the live lane

APPROVED

FOOTPATH

Footpath diverted onto berm between working space and carriageway
Second preferenceF2.2
Level 1

Notes

1. Minimum pedestrian footpath widths:
 - Residential/Rural/Suburban Centre - 1.2m
 - CBD - 2m
2. Where the length of the temporary footpath exceeds 20m, these widths may have to be increased so footpath users do not have to wait to pass
3. Temporary footpath surfaces must be suitable for footpath users
4. Use safety fence to enclose the working space, or at **attended** worksites, cones connected with cone bars can be used to enclose the working space but only for a short period of time
Note: Cone bars are not recommended where heavy equipment (eg a digger) is being used. A safety fence is preferred in these cases
5. Use barrier or safety fence to delineate the traffic side of the footpath, or at **attended** worksites cones connected with cone bars can be used to delineate the traffic side of the footpath for a short period of time (not for use on state highways)
6. There must be a lateral safety zone between the traffic side of the footpath and the live lane:
 - **0.5m** for barrier
 - **1m** for safety fence or cone bars
7. This TMD must be used in conjunction with appropriate TTM for any work carried out on the shoulder or in the live lane

APPROVED

2. CC2 Traffic not crossing road centre - heavy vehicle parked in carriageway

CC3 Work on berm and/or footpath - work vehicle parked on berm

Static operations

SHOULDER AND ROADSIDE ACTIVITIES

Work on berm and/or footpath - work vehicle parked on berm

Permanent speed less than 65km/h

CC3

Notes

1. Where contraflow or alternating flow is required if the work vehicle is parked in the carriageway, then the vehicle may instead be parked outside of the carriageway on the front or back berm if the ground surface is firm (not muddy)
2. The vehicle will be parked so that it does not obstruct the normal or safe entry to, or exit from, or movement of other vehicles, or pedestrians within the road reserve
3. Use of a T1A and TG2 is optional
4. Any pedestrian management required will be completed as per TMD F2.1, F2.2, F2.3, CC4 or CC5
5. A safety fence is required around any excavations, falling hazards (e.g. open manhole) or mechanical equipment.
6. Any berm areas affected by the parking of the work vehicle will be reinstated by Wellington Water / City Care with topsoil and grass to the same level as the adjoining berm

CC5 Footpath controller guiding pedestrians past the working space

Static operations

FOOTPATH

Footpath controller used to guide pedestrians safely past the working space
Not to be used on a Main Road as classified by WCC

1. To be used where foot traffic is low (no more than 15 people per hour - 1 person every 4 minutes)
2. No footpath directional signs required
3. Footpath controller must stop work and guide pedestrians past the working space (providing assistance as required)
4. Depending on the volume of foot traffic, an extra person may be required to act as Footpath controller
5. For all attended sites, cones can be used to delineate the edge of the working space and traffic side of the temporary walkway
6. The 1m lateral safety zone between the traffic side of the footpath and the live lane will not be required if the:
 - pedestrian diversion is into a shoulder (including parking lane) of carriageway (and not encroaching into the live lane), or
 - the temporary footpath encroaches into carriageway, but there is good alignment of traffic (taper) past temporary walkway, and
 - is not on a Main Road (as classified by WCC), a Major or Minor Distributor (as classified by HCC) or a Primary Arterial (as classified by UHCC)
6. Use kerb ramps (or available driveways) to assist mobility vehicles, pushchairs etc
7. A safety fence is required around any excavations, falling hazards (e.g. open manhole) or mechanical equipment
8. This TMD may be used in conjunction with other forms of pedestrian management
9. This TMD must be used in conjunction with appropriate TTM for any work carried out on the shoulder or in the live lane

Jason Wildman

Section F

SHOULDER AND ROADSIDE ACTIVITIES

Work in parking lane

Permanent speed less than 65km/h

F2.6
Level 1

Notes

1. Where work is carried out in the legal parking lane (a place where a vehicle would normally park with a footpath and/or kerb and channel alongside), the following minimum standard of TTM must be provided:

- a 10m taper in front of the work vehicle
- cones alongside the work vehicle and the working space
- a longitudinal safety zone
- a 1m lateral safety zone along the working space
- a T1A (or other appropriate advance warning sign) mounted on the back of the work vehicle

2. T1A road works and TG2 WORKS END signs are optional

3. The work vehicle must be no larger than a light truck and may have an amber flashing beacon

4. Traffic management must be provided where footpath users or cyclists are affected

5. This layout may only be used during daylight hours

6. Large plant and machinery must not be used in this situation, a more substantial closure is required

Section F

SHOULDER AND ROADSIDE ACTIVITIES

Shoulder closure

F2.7
Level 1

Notes

1. A 10m taper is allowed where shoulder width is less than 2.5m
2. *For shoulders exceeding 2.5m width, apply the following calculation; calculation of taper length for lateral shift of less than 3.5m is:

$$\frac{W \times G}{3.5}$$

3.5

W = Width of shoulder

G = Taper length in metres from the level 1 layout distance table

APPROVED

TWO-WAY TWO-LANE ROAD
Traffic not crossing road centre
Signs on median

F2.12
Level 1

Notes

1. Use this diagram if signs will not be visible on left-hand side of road, or if it is safer to place signs on median and this will not interfere with turning traffic movements
2. Where a median exists which is more than 2m wide, the signs may be positioned on the median. Signs must be placed back-to-back unless on a solid median
3. Where there is a solid median, signs are not required in the opposing direction
4. *Calculation of taper length for lateral shift of less than 3.5m is:

$$\frac{W \times G}{3.5}$$

W = Width of lateral shift
 G = Taper length in metres from the level 1 layout distance table
5. Use TSLs if required by TSL decision matrix
6. The T144 X0km/h AHEAD sign is optional

INSPECTION ACTIVITIES AND NON-INVASIVE WORKS

On shoulder and on the live lane

This TMD may also be applied on level LV roads

F4.10

Level 1

Notes

1. Inspectors must move from live lanes to avoid traffic. They must not expect traffic to drive slowly or drive around them
2. On level LV and level 1 roads, a person completing an inspection or non-invasive works cannot be on a live lane for more than 5 minutes
3. Unless otherwise approved by the RCA, all inspections on the live lane of level 1 roads require a spotter. The RCA may provide a list of roads, times and/or activities suitable for inspection by a single inspector
4. There must be CSD to the inspector when on the live lane. If this cannot be achieved, a spotter must be placed in a position where CSD can be attained and verbal instructions be given to the inspector. If this is not possible, a static or mobile operation is required.
5. A spotter is not required for inspections and non-invasive works on level LV roads or working off the live lane of a level 1 road
6. Where an unaccompanied inspector is not able to maintain adequate attention (eg due to work tasks or poor visibility), a spotter will be required or another type of traffic management operation used
7. For inspection activities that are carried out by a TC on level LV and level 1 roads the STMS must be immediately contactable but does not have to be within 30 minutes travel time of the worksite
8. An unaccompanied inspector may walk across a level LV or level 1 road
9. A vehicle is not required on a level LV or level 1 road with a permanent speed of less than 65km/h if the inspector remains on a footpath
10. On roads with a permanent speed of less than 65km/h an amber flashing beacon is not required on the vehicle if the inspector or non-invasive works is on an unsealed shoulder (or further away from the carriageway - including a footpath)

Spotter required
when inspector on
the live lane of a
level 1 road (*unless*
RCA has selected the
road as suitable for
'single inspector'
inspections)

Static operations

TWO-WAY TWO-LANE ROAD
Traffic crossing road centre
Two lane diversion

F2.13
Level 1

Notes

1. Cones are required on edge of the temporary lane opposite closure if road is not well defined
2. Return taper at end of closure may be shortened
3. *Calculation of taper length for lateral shift of less than 3.5m is:
 $W \times G$
3.5
W = Width of lateral shift
G = Taper length in metres from the level 1 layout distance table
4. To allow heavy vehicles to manoeuvre, cones in the channel must be offset by at least 10m where the direction changes. Refer C8.2.12
5. Use PN11 No Stopping signs, if necessary
6. Use TSLs if required by TSL decision matrix
7. The T144 X0km/h AHEAD sign is optional

APPROVED

TWO-WAY TWO-LANE ROAD

Single-lane alternating flow

Portable e-STOP

ATMS02
Level 1

Notes

1. Provide details of make and model of portable traffic signals in the TMP
2. Use PN11 no stopping signs, if necessary as per the approved TMP

3. Install temporary RP61/RP62 signs

4. Minimum 5 cones in cone threshold.

5. Extend or place extra advance warning signs towards on-coming traffic beyond any expected traffic queues

6. CONTINGENCY PLAN:
F2.14 to be implemented should issues arise with e-STOP/ adverse weather conditions or where stop go is unsuitable.
ex; Short term stoppages is defined as "stopping traffic for a short period of time within a static site, at inconsistent intervals to assist with the entry/exit of vehicles or small tasks required to be undertaken in the live lane".

7. In circumstances where for safety reasons, the use of stop/go operations is deemed more appropriate, a site specific safe work method statement must be prepared.

8. The T144 30km/h AHEAD sign is optional on roads under 65km/h

9. e-STOP can only be used on an attended site. e-STOPS must be manned at all times.

Static operations

TWO-WAY TWO-LANE ROAD
Single-lane alternating flow
Manual traffic control (STOP/GO or STOP/SLOW)

F2.14
Level 1

Notes

1. Extend or place extra advance warning signs towards on-coming traffic beyond any expected traffic queues
2. A 30m return taper at the end of the closure is mandatory
3. Cones are required on edge of the temporary lane opposite closure if road is not well defined
4. To allow heavy vehicles to manoeuvre, cones in the channel must be offset by at least 10m where the direction changes. Refer C8.2.12
5. Use PN11 no stopping signs, if necessary
6. MTC with RP4/RP41 STOP/GO or RP4/RP42 STOP/SLOW paddle on road shoulder located between 1st and 2nd cone in the cone threshold closest to the working space
7. Minimum 5 cones in cone threshold at:
 - 2.5m centres - less than 65km/h
 - 5m centres - more than 65km/h
8. Refer to C10.2.3 MTC essentials for further information
9. Delays cannot exceed the time approved by the RCA (normally 5 to 10 minutes)
10. The T144 30km/h AHEAD sign is optional

APPROVED

Static operations

TWO-WAY TWO-LANE ROAD - Intersection or roundabout
Closure at an intersection
Portable e-STOP - with MTC on side roads

ATMS04

Level 1

Notes

1. This plan can be used at a 3 way intersection by removing one of the approaches. If you require a temporary traffic light/MTC set up, which is greater than a four way, you will require a site specific TMP.
2. Signs and layout shown in the box at the bottom of the diagram is to be repeated on each approach.
3. Provide details of make and model of portable traffic signals in the TMP
4. Use PN11 no stopping signs, if necessary as per the approved TMP
5. Install temporary RP61/RP62 signs

6. Minimum 5 cones in cone threshold.
7. Extend or place extra advance warning signs towards on-coming traffic beyond any expected traffic queues
8. CONTINGENCY PLAN:
F2.22 to be implemented should issues arise with e-STOP/ adverse weather conditions or where stop/go is unsuitable.
ex; Short term stoppages is defined as "stopping traffic for a short period of time within a static site, at inconsistent intervals to assist with the entry/exit of vehicles or small tasks required to be undertaken in the live lane".
9. In circumstances where for safety reasons, the use of stop/go operations is deemed more appropriate, a site specific safe work method statement must be prepared.
10. The T144 30km/h AHEAD sign is optional on roads under 65km/h
11. e-STOP can only be used on an attended site. e-STOPS must be manned at all times.

Static operations

TWO-WAY TWO-LANE ROAD - Intersection or roundabout Closure at corner of an intersection Manual traffic control (Stop/Go or Stop/Slow)

F2.22
Level 1

Notes

1. This diagram may be used at a T intersection by removing any one of the roads
2. Signs and layout shown in the box at the bottom of the diagram is to be repeated on each approach
3. A 30m return taper at the end of the closure is mandatory
4. Use PN11 no stopping signs, if necessary
5. MTC with RP4/RP41 STOP/GO or RP4/RP42 STOP/SLOW paddle on road shoulder located between 1st and 2nd cone in the cone threshold closest to the working space
6. Minimum 5 cones in cone threshold at:
 - 2.5m centres - less than 65km/h
 - 5m centres - more than 65km/h
7. Refer to C10.2.3 MTC essentials for further information
8. On roads with a permanent speed limit of 100km/h, cones are required from the TSL to the taper if the speed is reduced by more than 30km/h
9. The T144 30km/h AHEAD sign is optional

Static operations
TWO-WAY TWO-LANE ROAD
All traffic stopped temporarily
Manual traffic control (STOP/GO or STOP/SLOW)
F2.15
Level 1
Notes

1. Closure period not to exceed the limit set or approved by the RCA
2. Extend advance warning signs towards on-coming traffic beyond any expected traffic queues
3. MTC with RP4/RP41 STOP/GO or RP4/RP42 STOP/SLOW paddle on road shoulder located between 1st and 2nd cone in the cone threshold closest to the working space
4. Minimum 5 cones in cone threshold at:
 - 2.5m centres - less than 65km/h
 - 5m centres - more than 65km/h
5. MTCs must show same message to oncoming traffic (eg STOP/STOP or GO/GO)
6. Refer to C10.2.3 MTC essentials for further information
7. When road users are passing the working space in alternating flow, all construction equipment must be stopped on same side of the road if there is no separation from the live lane
8. Where damage is likely to occur to passing traffic eg during sealing, traffic must be stopped in both directions
9. The T144 X0km/h AHEAD sign is optional

APPROVED

TWO-WAY TWO-LANE ROAD
Single-lane (traffic volume less than 1000vpd - 80vph)
Give way control

F2.16
Level 1

Notes

1. The RP51/RP22 and RP52 controls must be placed in the following priority order:
 - downhill traffic must give way to uphill traffic
 - traffic that has to cross into the opposing lane gives way, however where visibility for this vehicle is marginal the contractor may require the other vehicle with better visibility to give way
2. Intervisibility is required as indicated on diagram. This means that a vehicle at one sign is able to see whether the way ahead is clear
3. A 30m return taper at the end of the closure is mandatory
4. Use PN11 No Stopping signs, if necessary
5. Cones are required on edge of the temporary lane opposite closure if road is not well defined
6. The T144 X0km/h AHEAD sign is optional

Static operations

TWO-WAY TWO-LANE ROAD Single-lane alternating flow Portable traffic signals

F2.17
Level 1

Notes

1. Provide details of make and model of portable traffic signals in the TMP
2. Install temporary limit lines (must be able to be removed upon completion) or use RP61/RP62 signs
3. Approved temporary speed humps may also be used. Consider use of MTC while speed humps are installed
4. A 30m return taper at the end of the closure is mandatory
5. Cones are required on edge of the temporary lane opposite closure if road is not well defined
6. Extend or place extra advance warning signs towards on-coming traffic beyond any expected traffic queues
7. Use PN11 No Stopping signs, if necessary
8. Minimum 5 cones in cone threshold at:
 - 2.5m centres - less than 65km/h
 - 5m centres - more than 65km/h
9. The T144 30km/h AHEAD sign is optional
